*"Strive not to be a success, but rather to be of value."*

-Albert Einstein

**What are our customers are saying?**  
**Actual Survey Results Snippets...**

**Question:** What could we have done to better meet your expectations?

**Response:** Nothing. Very well done

**Question:** What could we have done to better meet your expectations?

**Response:** Your performance is excellent on each step of the process providing support.

## New Team Members

Help us welcome our newest team members! our team continues to grow!

**Christopher Martin** joins our sales team as a seasoned account manager!

**Douglas Hetu** joins our support team as an experienced IT Support Specialist

## Discover your exposure to outside attack before a hacker does

Threat actors today can literally cripple an organization with Ransomware or exploit sensitive customer data, causing significant financial harm to your customers and catastrophic harm to your reputation.

Our Vulnerability Assessment is a point-in-time service, which identifies potential sources of network breaches, provides recommendations on how to close them, and professional services as needed to secure your network.

Why do you need a Vulnerability Assessment?

## 2021 Cybersecurity Trends: Microsoft Releases Patch for Actively Exploited Windows Zero-Day Vulnerability

A day after Apple and Google rolled out urgent security updates, Microsoft has pushed software fixes as part of its monthly Patch Tuesday release cycle to plug 66 security holes affecting Windows and other components such as Azure, Office, BitLocker, and Visual Studio, including an actively exploited zero-day in its MSHTML Platform that came to light last week.

Of the 66 flaws, three are rated Critical, 62 are rated Important, and one is rated Moderate in severity. This is aside from the 20 vulnerabilities in the Chromium-based Microsoft Edge browser that the company addressed since the start of the month.

The most important of the updates concerns a patch for CVE-2021-40444 (CVSS score: 8.8), an actively exploited remote code execution vulnerability in MSHTML that leverages malware-laced Microsoft Office documents, with EXPMON researchers noting "the exploit uses logical flaws so the exploitation is perfectly reliable."
