Service Spotlight

Spotty Wireless? Dropped Wi-Fi connections? MTSI Offers Wireless Planning, Testing, and Remediation

Wi-Fi is an essential service for roaming workers, clients, and guests. People are more reliant than ever on mobile technology and they expect quality service. Spotty wireless access is a drag on productivity and may send customers looking for service elsewhere.

Let MTSi take the guesswork out of access point configuration and give you visibility to signal quality in the areas where it counts.

2021 Cybersecurity Trends: Meeting Backup Requirements for Cyber Insurance Coverage

Many companies wrongly assume that having backups in the cloud can prevent or reduce the impacts of a ransomware attack

The prevalence of ransomware has had a devastating impact on businesses over the past few years, with insurance underwriters seeing increasingly large ransomware payouts. As a result, some core cyber security hygiene fundamentals are being required by insurers to qualify for coverage.

For example, secure cloud backup has become a hard and fast requirement. Most cyber insurance providers are demanding that companies supply proof of their backup implementation in order to obtain an affordable policy. Furthermore, there are some additional capabilities that must now be implemented with cloud backups in order to pass the underwriting process. These include malware scanning, encryption, segmentation and multi-factor authentication.
