Success is not final; failure is not fatal: It is the courage to continue that counts. -Winston S. Churchill

What are our customers saying?

Real Customer Survey Questions:

Question: **What could we have done to better meet your expectations?**

Response: **nothing - very happy**

Question: **Additional Comments**

Response: **It's been a pleasure to work with Doug in finding and setting up a monitor that meets my needs.**

Keep Users and Devices Secure

Did you know over **80%** of hacking-related breaches leveraged weak, default, or stolen passwords?

Two-factor authentication is the **simplest, most effective way** to make sure users really are who they say they are.

It protects your applications and data against unauthorized access due to credential theft by verifying your users' identities before they access your data. But, not every two-factor solution is the same.

See what to look for when assessing and comparing two-factor authentication solutions in this helpful evaluation guide.

2022 Cybersecurity Trends: **US ranked 3rd largest cyberattack target, following Russia & Ukraine**

Seven percent of global cyberattacks target the United States, making it the most attacked country after Russia and Ukraine as of March 15th, 2022.

A survey of users in Australia, Canada, Germany, the U.K. and the U.S. conducted by Surfshark found that one-third of respondents had suffered data breaches in the past. According to the study, as much as 75% of Americans feel worried for their online safety.

Based on historic FBI records, the United States had the 2nd highest cybercrime rate in the world as of 2020, after the United Kingdom. Additionally, a breach detection mechanism shows that every 2 out of 3 Americans fell victim to data breaches in 2021.
