Services Spotlight

The Latest In EDR From VMWare
Free, Self-paced Test Drive and Presentation

Carbon Black Cloud is a new Endpoint Detection and Response (EDR) tool from VMWare that consolidates

multiple tools into one console. Carbon Black allows you to implement Zero Trust with fewer tools and deliver security with confidence and speed. Carbon Black gives you the flexibility to configure security policy granularly, so you can protect your organization from advanced threats without impacting legitimate business tasks.

For a limited time, MTSI is offering a Free, self-paced test drive of Carbon Black Cloud. The test drive will show you how easy it is to use Carbon Black Cloud to protect your organization and detect and remediate threats.

If you prefer an instructor led session, MTSi will be hosting a virtual presentation and demonstration on January 10th at 1:00 pm.

Contact **sales@mtsolutions.net** for access to the test drive or to reserve your seat for the presentation.

2022 Cybersecurity Trends:
Your Microsoft Exchange Server Is a Security Liability

Endless vulnerabilities. Widespread hacking campaigns. Slow and technically tough patching. It's time to

say goodbye to on-premise Exchange.

Official Link

ONCE, REASONABLE PEOPLE who cared about security, privacy, and reliability ran their own email servers. Today, the vast majority host their personal email in the cloud, handing off that substantial burden to the capable security and engineering teams at companies like Google and Microsoft. Now, cybersecurity experts argue that a similar switch is due—or long overdue—for corporate and government networks. For enterprises that use on-premise Microsoft Exchange, still running their own email machine somewhere in a closet or data center, the time has come to move to a cloud service—if only to avoid the years-long plague of bugs in Exchange servers that has made it nearly impossible to keep determined hackers out.
