## Tech Times

monthly newsletter

**In this Edition:** Planning for Wi-Fi 6E, US Government agencies hit in cyberattack. Top 5 security trends for 2023, News and Tips.

### Services Spotlight

### Planning for Wi-Fi 6E

Wi-Fi 6E opens up access to the 6GHz band (Wi-Fi 6 uses 5GHz) and with it a myriad of benefits including low latency, 3 times as many Wi-Fi channels, and the capacity for much higher bandwidth. Another key benefit is that devices like cordless phones, airport radar, perimeter sensors, and digital satellite don't interfere with Wi-Fi 6E like they do with previous standards.

With higher bandwidth, more channels and less interference, applications like VOIP and video over Wi-Fi will perform well and enable teams to do more without being tethered, so many organizations are considering the move to Wi-Fi 6E as end user devices become available.

### 2023 Cyber-Security Trends:

## US government agencies hit in global cyberattack

Several US federal government agencies have been hit in a **global cyberattack by Russian cybercriminals** that exploits a vulnerability in widely used software, according to a top US

cybersecurity agency.

The US Cybersecurity and Infrastructure Security Agency “is providing support to several federal agencies that have experienced intrusions affecting their MOVEit applications,” Eric Goldstein, the agency’s executive assistant director for cybersecurity, said in a statement on Thursday to CNN, referring to the software impacted. “We are working urgently to understand impacts and ensure timely remediation.”
